Introduces

CutWise "SONIC CUT" Brass Wire

The latest in brass technology and processing provides for dramatic increases in cutting speed with reduced secondary operations. Better surface finishes and reduced cycle time makes this the ideal choice for all applications. Speeds approaching coated performance wires with the cost advantage of brass provides for the most effective use of your machines and budget.

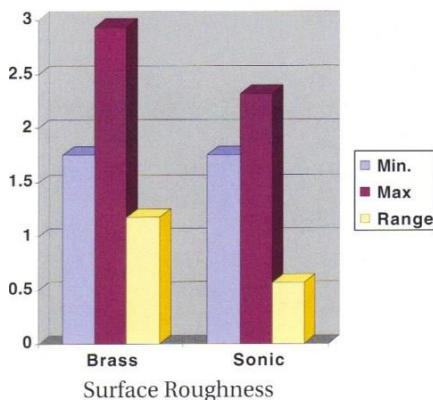

Tool Steel, 50mm, .010" Wire

Mits. 200H, Tool Steel, 50mm, .010" Wire

\$ 45.00	Billed Rate per Hour
10%	Increase in speed from SONIC
\$ 4.50	Cost saving per hour
\$ 3.40	Price of SONIC per pound
\$ 2.25	Price of current wire per pound
\$ 1.15	Difference in cost per pound
/ 2	Divided by hours per pound usage (Approx. 2 hrs per pound WS10)
\$.58	Difference in cost per hour

Based on this example for every .58 cents invested it will return \$ 4.50 and that is based on a low bill rate, a very low current wire cost and a very conservative increase in speed from the SONIC.

Surface Roughness

Features:

High Dimensional Tolerance +/- .0000394

Stable Performance

Outstanding Straightness

High Surface Quality

Cutting Speed increase of 10% to 22%

Don't be confused – no one has offered you this wire before.

This wire is not available from any other supplier or manufacture in the United States.

Sold exclusively by our authorized distributors.
